Industry Leader in Erosion Control and Environmental Solutions

- 20 years in business
- Exceptional dependable service
- Staff takes pride in consistently delivering excellence in all of our services
- We provide solutions for critical erosion control issues
- We guarantee your satisfaction
- We have an in house engineering staff that can customize solutions to meet your issues head on

Compost Filter Sock Installation

- Equipped with the most state of the art equipment to manage the most critical sites
- Truck and Track Mounted Equipment
- Compost filter socks are a far superior alternative to silt fence. Filter sock is made from biodegradable materials that are an environmentally effective solutions for perimeter sediment control.

Rain Gardens, Bio Retention Plantings, Stream and Wetland Mitigation

- Rain gardens help reduce stormwater runoff, filter pollutants, and promote groundwater recharge. JPH custom blends and installs engineered soil media full of organics that enhances plant growth and provides the required permeability.
- Our team works with multiple native plant growers across the Mid-Atlantic to offer the highest quality of diverse native plantings in the industry.

Engineered Soil Mixes

- JPH has two manufacturing locations in central Pennsylvania that specialize in producing custom engineered soil mixes. These mixes are designed to enhance water filtration and promote vigorous plant growth. We stock our standard planting soil, stormwater management soil, and organic compost.
- JPH can also manufacture the soil mixes onsite utilizing the virgin onsite topsoil. This allows us to lower the cost and carbon impact of the project.

Hydroseeding

- JPH utilizes Profile's line of hydroseeding products to offer environmentally friendly soil stabilization and vegetation solutions.
- Hydroseeding promotes faster seed germination, provides 100 % soil contact to reduce erosion, and provides uniform seed and soil supplement coverage.
- JPH offers sprayable erosion control solutions, such as Flexterra, to eliminate the use of non- environmentally friendly rolled erosion control blankets. Rolled erosion control blankets put over 1000 pounds of plastic and metal into the soil for every acre stabilized. Flexterra is a far superior alternative that is 100% biodegradable.
- We currently hold a seat on Profile's advisory board of only 8 industry professional across the United States.

Drill Seeding / Mulching

- We offer drill seeding services for a variety of applications.
- Our Truax seed drills will handle anything from fine clover and grass mixes to fluffy mixes such as riparian buffer, native wildflower, pollinator, and warm season grass mixes.

Permeable/Standard Paver Systems

- JPH offers a wide variety of permeable pavement solutions that deliver an attractive aesthetic appeal while helping clients meet storm water detention requirements. Permeable paver solutions often eliminate the need for detention basins or bio swales.
- We have installed permeable pavement systems on shoulders of urban roadways, in parking lots for school's and municipal buildings, and in basin forebays.
- Our services also include aesthetically pleasing plaza, courtyard, and streetscape paver systems.

Commercial / Industrial Landscaping

- JPH offers full commercial and industrial landscaping services for schools, municipal buildings, government/military projects, and warehousing to name a few.
- Our services include lawn installation, planting and establishment, and irrigation

Retaining Walls

- We offer a variety of retaining wall solutions from green walls constructed out of compost filter sock to traditional segmental walls to large block wall system such as Redi Rock. JPH can build to an existing design or propose a custom-tailored engineered design to meet our clients' specific needs.

Environmental Solutions for Energy Markets

- JPH specializes in providing full environmental solutions for energy projects such as industrial solar farms, transmission lines, and extraction well pads. We have the equipment and manpower to take on 500-1,000+ acre sites in regards to temporary stabilization, perimeter controls, final stabilization, and landscape enhancement buffers.
- Our company works with energy contractors to meet the strict erosion and sediment control / revegetation standards that they are held to. We evaluate each site and design a plan of action to meet the unique challenges that each project possesses.
